

Brake pads for rotor brakes

hält

I have no idea, how many of these pads I have built in. But I can honestly say that we are the best of friends.

Hans Lodwig, Manufacturing

Brake pads for JHS-300 and JHS-3000

JHS-300 and JHS-3000 are a copper based sintered friction facing for dry running applications.

A special combination of solid lubricants and friction coefficient-stabilizers gives high wear resistance even under high energy conditions. They are free of lead, antimony and nickel.

Typical Applications:

- Disc brake pads for wind turbine high speed brakes
- High temperature resistance: up to 500°C (930°F), short time up to 900°C (1650°F)
- Excellent wear resistance under high energy application
- Low wear on mating
